

Name: _____

1. (40 points) Supply the missing Python code to create a `Game` class such that the statements below will print the following output.

```
class Date:
    def __init__(self, month, day, year):
        self.month = month
        self.day = day
        self.year = year

    def __str__(self):
        return str(self.month) + "/" + str(self.day) + "/" + str(self.year)

# your code here, but write it below

championship = Game("Montana State", 62, "Idaho State", 56, Date(3, 11, 2017))
print(championship)

ncaa = Game("Montana State", 63, "Washington", 91, Date(3, 18, 2018))
print(ncaa)

should yield

Montana State beat Idaho State on 3/11/2017: 62 to 56
Washington beat Montana State on 3/18/2018: 91 to 6
```
