

Def A set is an unordered collection of distinct items called elements.

ex $D = \{0, 1, 2, 3, \dots, 9\}$ has 10 elements

$\text{bits} = \{0, 1\}$ has 2 elements

\mathbb{Z} = set of all integers

$\{\dots, -2, -1, 0, 1, 2, \dots\}$

has infinite elements

\mathbb{Q} = rationals

\mathbb{R} = reals

$V = \{a, e, i, o, u, y\}$ has 6 elts

$A = \{-20, \pi, a\}$

Def Two sets A, B are equal ($A = B$) if A and B contain exactly the same elements.

ex. $\{0, 1\} = \{1, 0\}$

Def We write $x \in S$ if x in S .

↑
"x is an element of S"

We write $x \notin S$ if x not in S .

ex $0 \in \text{bits} = \{0, 1\}$

$2 \notin \text{bits}$

$\pi \notin \mathbb{Z}$

Def The cardinality or size of set S is the number of distinct elements of S .

$|S|$

ex $|\text{bits}| = 2$

$|\{\underbrace{\{3, 4\}}, \underbrace{\text{cat}}\}| = 2$

Q Can we have a set such that (s.t.) $|S| = 0$?

Def The empty set, denoted $\{\}$ or \emptyset , is the set with no elements.

$|\emptyset| = 0$

$|\{\emptyset\}| = 1$

$F = \{\emptyset, \{\emptyset\}, \{\{\emptyset\}\}\}$

$|F| = 3$

Q If $A = B$, does $|A| = |B|$? T

Is the converse true? 2 min on own

If $|A|=|B|$, then $A=B$. F

Pf by counter example:

$$A = \{0\} \quad B = \{1\}$$

$$|A|=1, |B|=1, \text{ but } A \neq B.$$

Def Set builder notation defines a set

$$S = \{x : \underset{\substack{\uparrow \\ \text{such that}}}{a \text{ rule about } x}}\}$$

S contains the elements x s.t. the rule about x is true.

ex $\text{evens} = \{x : x \in \mathbb{Z} \text{ and } x \text{ even}\}$

" x such that x is in integers and x even"

$$\left[\begin{array}{l} \text{evens} = \{x : x = 2c \text{ for } \underline{c} \in \mathbb{Z}\} \\ \text{evens} = \{x : x \in \mathbb{Z} \text{ and } \underset{\substack{\uparrow \\ \text{"2 divides x"}}}{2 \mid x}\} \end{array} \right.$$

Def A is a subset of B (denoted $A \subseteq B$) if every element of A is also in B .

ex $\text{evens} \subseteq \mathbb{Z} \subseteq \mathbb{Q} \subseteq \mathbb{R}$

Q: $\mathbb{R} \subseteq \mathbb{Q}$? no, $\pi \in \mathbb{R}$ but $\pi \notin \mathbb{Q}$.

Q: $\emptyset \subseteq \mathbb{R}$ T

Note: $\emptyset \subseteq S$ for all sets S .

$S \subseteq S$ for all sets S .

($A \subset B$ means A is a strict subset of B ,
 $A \subseteq B$ and $|A| < |B|$)

Note: if $A \subseteq B$, then $|A| \leq |B|$.

Q: Is the converse true?

If $|A| \leq |B|$, then $A \subseteq B$ F

claim $\rightarrow \{x \in \mathbb{Z} : 18|x\} \subseteq \{x \in \mathbb{Z} : 6|x\}$

Step 1: understand claim!

The numbers divisible by 18 are contained/
a part of the numbers divisible by 6.

Every number divisible by 18 is also
divisible by 6.

Step 2: do some examples.

ex	X	$18 x?$	$6 x?$
	18	T	T
	4	F	F
		<u>T</u>	<u>F</u>

Pf Want to show $\{x \in \mathbb{Z} : 18|x\} \subseteq \{x \in \mathbb{Z} : 6|x\}$
Which is to say, if $a \in \{x \in \mathbb{Z} : 18|x\}$,
then $a \in \{x \in \mathbb{Z} : 6|x\}$ by def. of \subseteq .
assume $a \in \{x \in \mathbb{Z} : 18|x\}$.

$$a = 18c \text{ for } c \in \mathbb{Z}$$

def. of divisibility
by 18

$$a = 6 \cdot 3 \cdot c$$

factoring

$$a = 6 \cdot k \text{ for } k \in \mathbb{Z}$$

because $6c$ is
an integer, because
 $\text{int} \cdot \text{int} = \text{int}$

$$6|a$$

def. of divisibility

$$a \in \{x \in \mathbb{Z} : 6|x\}$$

claim $A \{x \in \mathbb{Z} : 2|x\} \cap \{x \in \mathbb{Z} : 9|x\} \subseteq \{x \in \mathbb{Z} : 6|x\}$

if a number is divisible by 2 and 9, then it is divisible by 6.

$A \cap B \subseteq C$ if $x \in A \cap B$, then $x \in C$.

$P \subseteq Q$ if $y \in P$ then $y \in Q$

examples

<u>x</u>	<u>$x \in A \cap B$</u>	<u>$x \in C$</u>
6	F	T
0	$x \notin B$ T	T

what a counter example would look like

Proof Assume $x \in A \cap B$. Want to show $x \in C$.

Statement

reason

$x \in A$ and $x \in B$

def. of \cap

$2|x$ and $9|x$

def. of A, B

$x = 2c$ and $x = 9d$
for integers c, d

def. of divisibility

$$\underline{2c} = \underline{9d}$$

substitution

$$2 \mid 9d$$

def. of divisibility
($9d = 2k$ for $k \in \mathbb{Z}$)

$$2 \mid d$$

because $2 \nmid 9$

does not divide

$$d = 2y$$

for $y \in \mathbb{Z}$

def. of divisibility

$$x = 9 \cdot 2 \cdot y$$

substitution

$$\underline{x = 18e} \text{ for } e \in \mathbb{Z}$$

$$x = 6 \cdot 3 \cdot e$$

$$\underline{x = 6f} \text{ for } f \in \mathbb{Z}$$

factoring

$$f = 3 \cdot e \in \mathbb{Z} \text{ by}$$

int. int. = int

by def. of
divisibility

$$6 \mid x$$

$$x \in C$$

9/8 on a paper w/ your name:

Write the set builder notation for:

$A \cap B$

$\{x : x \in A \text{ and } x \in B\}$

$A \cup B$

$\{x : x \in A \text{ or } x \in B\}$

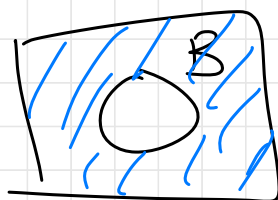

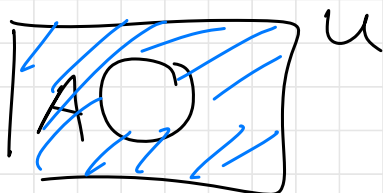

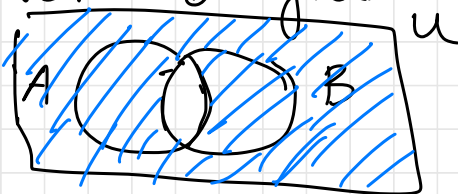

\bar{A}

$\{x : x \notin A\}$

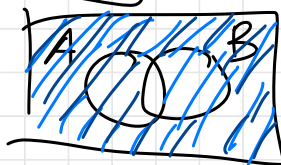

Draw the Venn Diagram for:

$A \cap B$

$(\bar{A} \cup \bar{B})$

$(A \cap B) \cup C$

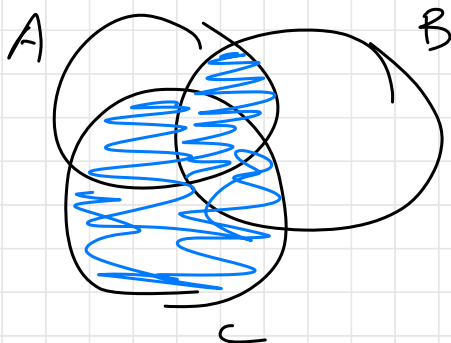

recall \bar{A} :

even integers
↓

recall set builder notation: $\{x \in \mathbb{Z} : 2 \mid x\}$
example

$$(A \cap B) \cup C$$

Def Given a set S , the power set of S is the set of all subsets of S .

$$\mathcal{P}(S) = \{A : A \subseteq S\}$$

$\emptyset \subseteq B$ for all sets B

ex $S = \{1, 2, 3\}$

$$\mathcal{P}(S) = \{ \emptyset, \{1\}, \{2\}, \{3\}, \\ \{1, 2\}, \{1, 3\}, \{2, 3\}, \\ \underline{\{1, 2, 3\}} \}$$

$$|\mathcal{P}(S)| = 8 \checkmark$$

Fact $|\mathcal{P}(B)| = 2^{|B|}$ for all sets B .

ex $|S| = 3$, $2^3 = 2 \cdot 2 \cdot 2 = 8 \checkmark$

Note power set is also denoted 2^B for set B .

$\mathcal{P}(B)$, 2^B same

$\emptyset \in \mathcal{P}(B)$ for all sets B

$B \in \mathcal{P}(B)$ for all sets B

Question: is $\emptyset \in \overline{\emptyset}$

Let's do an example. Suppose $U = \mathbb{Z}$.

$\overline{\emptyset} = \mathbb{Z}$ is $\emptyset \in \mathbb{Z}$? no.

$$3 \in \mathbb{Z} \quad \{3\} \in \mathbb{Z}$$

Question: is $\emptyset \subseteq \overline{\emptyset}$?

$\emptyset \subseteq S$ for all sets S

Theorem (De Morgan's Law)

$$\overline{A \cap B} = \overline{A} \cup \overline{B}$$

Proof We prove the equivalent claim:

$$\textcircled{1} \quad \overline{A \cap B} \subseteq \overline{A} \cup \overline{B} \quad \text{and} \quad \overline{A} \cup \overline{B} \subseteq \overline{A \cap B} \quad \textcircled{2}$$

proof of ① Let $x \in \overline{A \cap B}$. WTS that $x \in \overline{A} \cup \overline{B}$.

Proof of (2).
