Command line arguments

int main(int argc, char* argv[]) {

…

- argc is argument count
- argv is argument vector (array) of **strings**
- To convert string x to int a:
  - int a = atoi(x);
  - int a = strtol(x, NULL, 10) (last arg is base)
- To convert string x to double b:
  - double b = atof(x);
  - double b = strtof(x, NULL)
